1. Platform Overview

Eyad LMS is a lightweight learning management system and public website for Eng. Eyad Mazhar, an American Mathematics instructor in Egypt. It supports American Math, EST, DSAT, and ACT preparation through a simple workflow: the teacher creates accounts, assigns groups, publishes learning content, and students consume that content through a protected portal.

Core Operating Principle

Students do not self-register, pay online, or request approval through the website. The teacher creates each account, sends credentials privately, and assigns one or more groups. Group membership determines which active sessions, resources, and quizzes are visible.

Typical Lifecycle

- Create a group
- Create a student
- Assign the student to that group
- Create content for the group
- Preview it as an admin
- Give the student their credentials

2. Users and Access Model

Role	Can Do	Cannot Do
Admin	Manage admins, students, groups, sessions, resources, quizzes, extra attempts, and activity. Preview active student content without group membership.	There is no separate fine-grained permission matrix beyond the admin role.
Student	View assigned active sessions and PDFs, take assigned quizzes, and review attempts.	Cannot register, access admin pages, edit content, upload files, or perform self password resets.
Visitor	View public pages and submit the public contact form.	Cannot access protected learning content.

Authentication & Access Behavior

- **Login Process:** Credentials are verified with PHP password_verify() at public/login.php.
- **Session Management:** Successful login stores the user in a PHP session and redirects by role.
- **Group Access:** A student may have a primary group in users.group_id plus additional memberships in user_group_access. The application combines both lists, removes duplicates, and uses the result for access checks.
  - **Content Visibility:** Sessions, resources, and quizzes each have their own group-access table. Content must be active and assigned to at least one matching group.

3. Public Website Guide

Page	Route	Purpose
Home	public/index.php	Primary public landing page for American Math, EST, DSAT, and ACT preparation. Contains combined instructor & platform information as well as the public contact inquiry section.
Contact	public/contact.php	Public inquiry form submitted asynchronously through Web3Forms. Messages are automatically sent to engeyadmazhar@eyadmazhar.com.
Login	public/login.php	Shared login for admin and student accounts; marked noindex.

Contact Form Integration

The contact section uses Web3Forms API with asynchronous JavaScript submission. Messages sent through the contact form are routed directly to engeyadmazhar@eyadmazhar.com hosted on mail.hostinger. The form provides immediate visual feedback without a full page reload.

4. Admin Dashboard Guide

After an admin signs in, the application redirects to admin/dashboard.php. The shared admin navigation contains: Dashboard, Students, Admins, Groups, Sessions, Resources, Quizzes, Activity Log, and Logout.

Admin Action Checklist

- Confirm the database connection and create a secure initial admin.
- Create meaningful groups with names and levels that students will understand.
- Create student accounts with unique usernames and strong passwords.
- Assign each student to the correct primary and additional groups.
- Build and order sessions, then assign access groups.
- Upload resources and verify each file opens correctly.
- Create quizzes with questions, answer keys, limits, and group access.
- Use dashboard previews to verify the student-facing listings.
- Monitor Activity Log after students start using the site.

5. Student Management

Open admin/students.php from the dashboard. Student records are created manually because enrollment occurs outside the site.

Creating and Managing Student Accounts

- **Account Creation:** Enter student name, unique username, strong password (hashed before storage), parent phone contact details, primary group, and additional group memberships.
- **Account Updates & Password Management:** Administrators can update student identity details, modify primary or additional group assignments, update account passwords, or toggle status between Active and Inactive.
- **Student Support Note:** When a student loses access, an administrator must manually update their password within the admin student management interface. There is no public password-reset email flow.

⚠ *There is no self-service password reset. All credential changes must be performed by an admin via admin/students.php.*

6. Groups and Access

Open admin/groups.php. Groups are learning cohorts or tracks, not necessarily school grades. Each group has a name and level label.

Content Type	Access Table	Student Visibility
Session	lecture_folder_access	Visible when any student group matches an allowed group and the session is active.
PDF Resource	resource_group_access	Visible when any student group matches an allowed group and the resource is active.
Quiz	quiz_group_access	Visible when any student group matches an allowed group and the quiz is active.

7. Sessions and Media

The admin interface calls lectures Sessions. Open admin/lectures.php to create, edit, order, activate, deactivate, assign, or delete them.

i *Media Architecture Constraint: Session media support is restricted strictly to direct Google Drive links of the lecture video file. Drive folder URLs, Drive folder IDs, YouTube links, and generic third-party links are not supported.*

Lecture View Security & Recording Protection

The lecture view incorporates client-side media protection mechanisms designed to deter unauthorized content recording and capture. If a student attempts to record or capture the session using keyboard shortcuts (e.g., PrintScreen), right-clicks the player area, or switches/loses focus from the active browser window, the system immediately triggers a full black overlay with the message: "Recording not allowed".

⚠ *Security Disclaimer: Browser-level capture deterrents are not a security boundary. Production DRM, CSRF protection, rate limiting, recovery workflows, and formal migrations require additional implementation.*

8. PDF Resources

Open admin/resources.php to manage downloadable study material. Only valid PDF files up to 20 MB are accepted. Uploaded files undergo MIME type and extension validation and are saved under uploads/pdfs/ with randomized file names.

- Maximum file size: **20 MB**
- Validation: MIME type and extension checks enforced
- Storage: uploads/pdfs/ with randomized filenames for security

9. Quizzes and Attempts

Open admin/quizzes.php to manage quiz metadata, questions, images, group access, time limits, extra attempts, and attempt summaries.

Attempt Lifecycle

Step	Action	Description
1	Start	Creates an in_progress attempt with a start timestamp.
2	Submit	Compares student selections with stored correct answer keys, records total score, percentage, and submitted status.
3	Expire	Timed-out attempts automatically transition to expired status and receive a zero score.
4	Review	Completed and expired attempts allow students to review question-level selections and correct answers via student/quiz_review.php.

10. Activity Log

Open admin/activity_log.php to view recent platform activity, including lecture watch events and quiz submission attempts. The log displays up to 200 records sorted by timestamp.

- **Log Capacity:** Up to 200 most recent records
- **Log Events:** Lecture watch events and quiz submission attempts
- **Log Management:** Administrators can delete individual records to maintain accurate operational reporting.

11. Student Portal Guide

Students access the platform using the central login page and are routed to student/dashboard.php upon authentication. The student portal navigation consists of Dashboard, Sessions, Resources, Quizzes, and Logout.

Portal Features

- **Sessions**

  View and play assigned active video lectures via the embedded player with active recording deterrents.

- **Resources**

  Access descriptions and direct download links for assigned study materials.

- **Quizzes**

  Take timed or untimed practice tests and inspect score reviews upon completion.

12. Theme and Interface System

The unified visual identity is defined in assets/css/theme.css using a clean palette. UI components leverage Bootstrap 5.3.3 styling with rounded cards, soft drop shadows, and responsive table layouts.

Color Palette

Name	Hex Code	Usage
Navy	#111827	Primary backgrounds, headings, nav
Cyan	#06B6D4	Accents, links, highlights
Light	#F8FAFC	Page backgrounds
Ink	#0F172A	Body text

13. Technical Architecture

Layer	Implementation	Key Locations
Presentation	PHP templates, HTML5, CSS3, JavaScript, Bootstrap 5.3.3	public/, admin/, student/, assets/css/
Authentication	PHP sessions, role checks, password hashing	includes/auth.php
Database	MySQLi, prepared statements, utf8mb4	config/database.php
Storage	Local PDFs and quiz images; external Google Drive videos	uploads/pdfs/, uploads/quizzes/

14. Database Reference

Table Name	Purpose & Operational Scope
users	Admin/student identity, login, contact details, role, status, and primary group.
groups & user_group_access	Learning group names, difficulty levels, and student secondary group access mapping.
lectures & lecture_folder_access	Session titles, direct Google Drive video URLs, sequence order, status, and group access mapping.
resources & resource_group_access	PDF title, file path, status, and group permission mappings.
quizzes & quiz_group_access	Quiz configuration, question items, answer keys, time limits, attempt rules, and group access.
quiz_attempts & quiz_attempt_answers	Attempt state tracking, recorded scores, timestamps, and individual answer selections.
lecture_views & activity_log	Session watch logs and platform operational activity logs with deletion capabilities.

15. Installation and Configuration

Prerequisites include PHP 8+, Apache with mod_rewrite enabled, and MariaDB / MySQL. Place the platform files in the Apache server directory and ensure proper file writing permissions for uploads/ folders.

Requirements

- PHP 8 or higher
- Apache web server with mod_rewrite enabled
- MariaDB or MySQL database
- Write permissions on the uploads/ directory

16. Security and Operations

Security Measures

- **Password Hashing:** Enforced password hashing using standard PHP password_hash() algorithms.
- **Session Controls:** Role-based session validation enforced across all administrative and student routes.
- **SQL Injection Protection:** Prepared SQL statements utilized exclusively across database transaction endpoints.
- **XSS Prevention:** Input sanitization and output escaping implemented on user-submitted data.

17. Troubleshooting

Common Issues

Student Cannot Access Session

- Verify student status is set to **Active**.
- Ensure group assignment matches the required content group.
- Check that the session's active status flag is enabled.

Lecture Video Fails to Render

- Ensure the target video URL is a **direct Google Drive link** of the lecture video.
- Verify that link sharing permissions allow embedding.

18. Current Limitations

Known Limitations

- **Account Lifecycles:** No self-registration, public e-commerce payment flows, or automated email password recovery.
- **Media Hosting:** Video playback relies strictly on direct Google Drive lecture links.
- **Security Scope:** Client-side overlay deterrents provide basic recording deterrence but do not replace production DRM.

19. Production Configuration & Credentials

🔒 *CONFIDENTIAL — This section contains sensitive environment settings and database connection parameters for hosting deployment. Keep these credentials secure and never commit them to version control.*

Configuration Key	Domain / Production Value
Database Host (DB_HOST)	Localhost
Database Name (DB_NAME)	u335794897_eyad_lms
Database Username (DB_USER)	u335794897_eyad_lms_user
Database Password (DB_PASS)	EyadLms2026!Secure
Database Port (DB_PORT)	3306
